

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	02/10/2026
Team ID	SWTID-2026-8585
Project Name	IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Employee target table	Create u_employee_test with Employee ID, Employee Name, Email, Department, and Location fields.
FR-2	Spreadsheet staging and load	Load .xlsx employee data into u_employee_import as an import set, using the selected worksheet and header row.
FR-3	Transform map and field mapping	Map Employee ID, Name, Email, Department, and Location from the import set to the corresponding target fields; map source Name to Employee Name.
FR-4	Insert and update by Employee ID	Set Employee ID as the coalesce key. Insert records for new IDs and update the matching employee record for an existing ID. Employee ID must be populated and unique in the target table.
FR-5	Transform and verify results	Run the transform and make the run state and row outcomes available for review; verify the imported records in u_employee_test and inspect Transform History.
FR-6	Employee reports and dashboard	Provide a Department count pie chart, a Location count bar chart, an employee list with the five employee fields, and a dashboard containing all three reports.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provide a repeatable file-load and transform workflow with clear source/target field names and visible run results.
NFR-2	Security	Restrict access to employee spreadsheets, import tables, target records, reports, and dashboards to authorized users; apply instance ACL and role controls. Employee data is sensitive.
NFR-3	Reliability	Use Employee ID as a populated, unique coalesce key; preserve row-level transform results so inserted, updated, ignored, and failed rows can be reviewed.
NFR-4	Performance	Process spreadsheet imports in batches sized for the instance and agreed data volume; record transform duration and errors before setting a numeric service target.
NFR-5	Availability	Make the import workflow available when the ServiceNow instance is operational and the user has the required access; no separate availability service is in scope.
NFR-6	Scalability	Use the import-set staging and transform-map process for repeat and larger imports; validate processing time and table growth against the expected volume before production use.
